EMC APPLICATIONXTENDER 6.5

Instant document management solution that drives business results

ESSENTIALS

- Supports 2010 versions of Microsoft Office and SharePoint

- IRM Services for ApplicationXtender enables you to maintain control over intellectual property no matter where the information resides

- Module-based product packaging with compelling add-on's for Workflow, Capture, Reports, SharePoint, and IRM

- Usability enhancements and easy integration with existing business applications—such as Microsoft SharePoint

Designed to meet the budget and functional requirements of enterprise departments and midsize organizations, EMC® ApplicationXtender® is an instant document management solution that reduces costs by streamlining the capture and management of documents – helping you to minimize the challenges associated with managing paper.

Now with support for the 2010 versions of Microsoft Office and SharePoint, ApplicationXtender further increases productivity for Microsoft Office and SharePoint end users by providing transparent access from Office and SharePoint 2010 to the ApplicationXtender repository, where images and documents can be securely stored, easily managed, and quickly retrieved. Of note, SharePoint 2010 users can now search both SharePoint and ApplicationXtender simultaneously, without having to leave their SharePoint 2010 interface. Search results are merged and presented in an easy to read page.

ApplicationXtender leverages your existing IT infrastructure to electronically store, organize, and manage virtually any kind of business content. Easy to implement, integrate, and manage—providing instant, role-based access to content from either a desktop interface or web browser – ApplicationXtender is based on an easy-to-use Microsoft Windows/.NET-optimized system and provides many out-of-the-box features that make it simple to create, modify, and implement business solutions without IT support.

EASY TO INSTALL, SET UP, AND MODIFY WORKFLOWS

ApplicationXtender's advanced workflow solutions offer complete capabilities for creating departmental and horizontal workflow solutions designed to improve efficiency in operational business processes. With features including out-of-the-box workflow samples, a user-friendly Process Builder, and built-in reporting and forms support, designing and managing business processes has never been easier. This easy add-on workflow management solution allows every business user to design, implement, and manage their processes without IT support. As a result, workflow management enables organizations to improve business performance, reduce costs within and across functional business units, and raise productivity levels.

EASY ACCESS OF BUSINESS-READY CONTENT VIA SHAREPOINT

With ApplicationXtender SharePoint Services - now with support for Microsoft SharePoint 2010 - SharePoint applications can provide complete visibility and seamless access to documents stored within ApplicationXtender content repositories to improve the productivity of SharePoint 2010 end users. Web Parts controls provide a direct portal into ApplicationXtender content, including fully customizable queries and complete document lists based on query results. SharePoint users can leverage ApplicationXtender viewing tools to see the content directly in the SharePoint browser-based user interface. In addition to downloading these documents for local use, SharePoint users can view these documents within the browser, view thumbnails of multiple page documents, or zoom into specific areas of a single page.

PROTECT INTELLECTUAL PROPERTY

Organizations continually deploy and enhance firewalls and anti-spyware software, install VPN networks, and implement other secure methods to successfully protect their information. But at times, such security measures fall short. Today, the majority of costly security breaches and anomalies are not the result of intruders from the outside accessing confidential internal information, but rather the result of insiders taking or sending confidential material beyond an organization's perimeter walls.

IRM Services for ApplicationXtender is an optional add-on capability that assigns rights protection policies to documents anytime a document is exported from ApplicationXtender or sent as an e-mail file attachment. For example, IRM policy enforcement can safeguard hospital patient records stored on a laptop, even if that laptop is brought out of the hospital network, lost, stolen, or kept offline. Loss of such private information could cost a hospital millions of dollars in damages – not to mention considerable embarrassment. With IRM Services for ApplicationXtender, those patient records can be protected, regardless of where they reside, as once the data loss is detected by the hospital, the patient records can be immediately expired, preventing anyone from viewing, copying, printing, or emailing them. Be it patient records, county court minutes, credit union financial statements, construction drawings, law enforcement records, or your town's residential water bills, sensitive information can now be protected from loss or theft with IRM Services for ApplicationXtender.
